Version 1 (launch)

1. **AI Homework Helper**: This is the core promise of the app and the main reason a student would download it. Without it, there's no product.
2. **Simple Lesson Explanations**: It uses the same AI engine as the homework helper, so it's cheap to build alongside it, and it directly solves the "difficult topics" problem.
3. **AI Quiz Maker (quizzes and flashcards)**: Practice is how students actually retain information, and it gives them a reason to come back after the first session.
4. **Smart Study Planner (basic version)**: Organization is half your pitch. Start simple: the student enters tests and due dates, and the app builds a schedule. Skip fancy optimization for now.
5. **Progress Tracker (basic version)**: Even simple stats like sessions completed and quiz scores show students the app is working, which keeps them motivated. It also generates the data you'll need for later personalization.

Future updates

1. **Photo capture of worksheets**: Valuable, but it needs image recognition and handwriting handling, which adds cost and complexity. Version 1 can use typed questions to prove the concept first.
2. **Voice tutoring**: Speech input and spoken output are a big technical add-on. It's a great upgrade once the text-based tutoring is solid.
3. **Personalized learning plans**: These depend on having real progress data from users. Version 1's tracker collects that data so this feature can be built on it.
4. **Teacher feature**: This serves a different audience and requires accounts, class management, and sharing tools. It's better to nail the student experience first, then expand to classrooms.

Why this split works: Version 1 covers the full loop of *learn → practice → plan → track* using one core AI system, so it's useful on day one without being huge to build. The future features each need extra technology, extra data, or a new type of user, so they fit better after you've launched and learned what students actually use.

Why Each Version is important.

1. **AI Homework Helper:** It delivers the app's core promise by helping students understand how to solve problems instead of just getting answers.
2. **Simple Lesson Explanations:** It makes difficult topics approachable, which builds the confidence students need to keep learning.
3. **AI Quiz Maker:** It turns studying into active practice, which helps students remember information and gives them a reason to keep using the app.
4. **Smart Study Planner:** It helps students manage their time so they can prepare for tests and homework without feeling overwhelmed.

5. **Progress Tracker:** It shows students how far they've come and which subjects need more work, keeping them motivated and focused.
